What is claimed is:

- An electrical cable comprising a plurality of spaced, parallel flat conductors, each of said plurality of flat conductors having been previously integral with each immediately adjacent flat conductor.
- 2. The electrical cable of Claim 1, wherein said conductors are metal.
- The electrical cable of Claim 1, wherein said conductors are held in said spaced, parallel relationship by at least one of said webs of dielectric material.
- The electrical cable of Claim 1, wherein said dielectric material comprises a polymer.
- The electrical cable of Claim 1, wherein said dielectric material comprises a nonwoven.
- 6. The electrical cable of Claim 1, wherein said dielectric material comprises PTFE.
- The electrical cable of Claim 1, wherein said dielectric material comprises expanded PTFE.
- The electrical cable of Claim 1, wherein said dielectric material comprises microporous film.
- A method for making an electrical cable having a plurality of spaced, parallel flat conductors comprising the steps of:
 - (a) providing first and second web of dielectric materials;
 - (b) providing a third sheet of conductive material;
 - (c) bonding said first and second web materials to said third sheet of conductive

- material in a face-to-face layered relationship thereby forming a bonded laminate; and
- incrementally stretching said bonded laminate to form a plurality of spaced, parallel flat conductors.
- 10. The method of Claim 9, wherein said conductor comprises a metal sheet.
- 11. The method of Claim 9, wherein said conductor comprises a metal foil.
- 12. The method of Claim 9, wherein said dielectric material comprises a nonwoven.
- 13. The method of Claim 9, wherein said dielectric material comprises a polymer film.
- 14. The method of Claim 9, wherein said dielectric material comprises PTFE.
- 15. The method of Claim 9, wherein said dielectric material comprises expanded PTFE.
- The method of Claim 9, wherein said dielectric material comprises expanded microporous film.
